

Research Desk UAT

Three simulated days of the WhatsApp research desk, run end to end through the real code: invite, onboarding, scheduler, worker, PDF and chart, delivery rules, receipts and a correction. Only Meta's server is faked. Grey notes show what happened behind the scenes; the customer never sees them.

Your D07 check

Use only the chat below (open the PDF and chart as you would on your phone). No dashboard. Reply in our chat with what you found for each:

1. The session path that would turn bullish, its trigger, and what invalidates it.
2. The focus stocks for the day, and why each one was shortlisted.
3. One piece of data the report could not give you, and the stated reason.
4. The source and the time for any one number you rely on.

Also note anything that confused you, felt too long, or would make you distrust the desk. That feeds the next round.
